Connections and rear view

⚡ * Risk of electric shock. The 'EK' external control function shares terminal 4 with the common of the input signal connection. When measuring dangerous voltages AND using 'EK' external control contact, apply the appropriate protections to isolate the operator from dangerous voltages.

As requested by security regulations EN-61010-1, add a protection fuse to the power line, with value :
 250 mA time-lag for power voltage > 50 Vac/dc
 400 mA time-lag for power voltage < 50 Vac/dc
